Presenting the Walkthrough

in four minutes

Care Triage · a word-for-word script, with what is on screen while you say it

The whole video is you on camera for a minute, then one page of the app, the Walkthrough, which is the page `streamlit run app/dashboard.py` opens on. Six stops, a Next button, one live run. About 495 spoken words: 3:32 at a normal pace, 3:48 read slowly to a camera. The shape: who you are and what you did for clients, the problem at the bank, why you rebuilt it here, one email and the pile, the question, four steps done live, the one the system got wrong and what responsible AI looks like, what changed for the business, the honest number, and day one.

Before you start, once

Once: install the requirements and Ollama, then `ollama pull nomic-embed-text` and `ollama pull llama3.2`.

Before you start, every time

1. Start Ollama. Run `streamlit run app/dashboard.py`. The browser opens on the Walkthrough. Set the browser zoom to 125%.
2. Press Next to stop 3, keep “Charged twice this month” selected, press “Handle this email” once as a warm-up. The first draft loads the model and is slow. Note how long the draft card takes; that is the pause in Part 3.
3. Delete `out/reviews.jsonl` if it exists and reload, so the review counters start at zero. Press Back to stop 1.
4. If Ollama is not running, stop 3 says so and the other five stops still work. Say the words anyway and point at the step cards, or open any email in the Inbox and show its steps there.

The script

Each part has two blocks: what is on screen, and what you say. Say it the way you would explain it to a friend. Pauses are fine.

PART 1 Who I am, and the problem at the bank 0:00

SHOW Camera. Look at the lens, not the screen. This first minute is all you, so let it be calm and unhurried.

SAY

Hi, I'm Khushi Gor. For a year and a half I was an AI engineer at Must IT Services. Our clients were mostly in finance, and my job was turning AI into things they could actually run. I started on the OpenAI platform and ended up building AI that ran inside the client's own walls, so their data never left.

SAY

One client, a bank, had a problem that lived in an inbox. Every email was opened, sorted and answered by hand, from scratch. The team lead couldn't see the week without reading the pile. I built them a system that sorted the emails, read the mood, found the policy, and drafted a reply for an agent to edit.

SAY

I can't show you theirs. So I studied your guarantee, your products and your customer reviews, and built a small version for your inbox.

PART 2 The pile, and the question 1:05

SHOW Switch to the screen. Walkthrough, stop 1. Jean's email is on the left, the count and the newest emails on the right. Point at the email, then at the table.

SAY

Picture one email. Jean was charged twice this month. Now picture the pile.

SHOW Press Next. Stop 2, the question, big on screen. Pause a beat after you ask it.

SAY

So the question was simple. Could we sort the pile before a person opens it, and give them a head start on the reply?

PART 3 Four steps, live 1:20

SHOW Press Next. Stop 3. "Charged twice this month" is already selected. Click "Handle this email" as you say "Here's what I built". The first three step cards fill in under a second. The brief and the draft take a few seconds each and say "writing", so keep talking. The last card shows "Looks safe" with green ticks. Point at each card as you reach it; each one carries a tag saying whether that step is an AI model, generative AI, a rule, or a person.

SAY

Here's what I built, in four steps. One, sort it: what it's about, how she feels. Billing, and unhappy. Two, find the page. It pulls your policy, and a language model throws out the paragraphs that don't answer her. Three, the same model writes a two-line brief and a first draft, from your policy only. It can't promise refunds or give health advice. Four, a person decides.

SAY

Scan results, health questions, anyone cancelling because it didn't work: those skip the draft and go straight to a Bone Health Consultant. That's a rule from your guarantee, not the model's choice.

PART 4 The one it got wrong 2:05

SHOW Press Next. Stop 4. Muriel's email is on the left, the draft on the right. Hover the highlighted sentence as you say "taper off", then point at the red Fail row in the scorecard. On the last three sentences, gesture at the scorecard: that is the log and the guardrails they are hearing about. Slow down here.

SAY

Now the part I'm proudest of, because it went wrong. Muriel asked about switching from basic to Plus. The draft told her to taper off her dose. Nothing in your pages says that. A check I built, rules, not another model, asks every sentence where it came from. That one had no answer. The draft failed, and a person wrote the reply. That's what responsible AI looks like in practice. It never sends, every step is logged, and a person has the last word.

PART 5 What changed for the business 2:40

SHOW Press Next. Stop 5. Four numbers, the weekly chart, two short paragraphs. Gesture at the agents' paragraph, then the team lead's, then the chart for the business line.

SAY

For the agents, no more blank screen. Each email arrives sorted, with a draft to edit. For the team lead, the whole week on one screen. And the business hears its customers the same week, not at quarter end. The same sorter could read reviews and chat too, so the whole voice of the customer lands in one place.

PART 6 The honest number, and day one 3:05

SHOW Press Next. Stop 6. The table of "when it says sure, it is right N in 10".

SAY

The honest number: it's right about three times in four on emails it has never seen. So a person always decides.

SHOW Camera, for the last paragraph. Stop recording two seconds after the last word.

SAY

I learned your world in a weekend. On day one I'd sit with your consultants and label real emails, because their judgement is what this should learn. Your values page says do the right thing even when it hurts. For me, that's showing you the draft that made something up. Thanks for watching.

Shot list

Time	On screen	Action
0:00	Camera	Part 1: who you are, the clients, the bank, why this rebuild. A minute, all camera.
1:05	Stop 1	Jean's email, then the pile.
1:10	Stop 2	The question. Pause after it.
1:20	Stop 3	Click "Handle this email". Talk through the wait. Point at the ticks.
2:05	Stop 4	Muriel's draft. Hover the sentence, point at the Fail row, then the scorecard.
2:40	Stop 5	Four numbers, the chart, two paragraphs.
3:05	Stop 6	The honest number, then camera.
3:15	Camera	Last paragraph. Done by about 3:40.

If it runs long

In this order, until the timed run is under 3:45:

1. Part 5: drop "The same sorter could read reviews and chat too, so the whole voice of the customer lands in one place."
2. Part 3: drop "That's a rule from your guarantee, not the model's choice."
3. Part 1: drop "The team lead couldn't see the week without reading the pile."

Plain words

Keep these off camera: embedding, classifier, logistic regression, retrieval, RAG, vector, BM25, LLM, cosine, threshold, pipeline, latency, out-of-fold, calibration. Say "the system" or "the sorter". The one AI phrase in the script is "a language model", in Part 3. If someone asks which one, it is llama3.2 running on the laptop with no internet, and the check in Part 4 is rules, not a model. Do not say the system "understands" emails or "knows" the policy. It sorts, finds and drafts. A person decides. Do not apologise for the error in Part 4. It is the point of the story.

If they want more

If they want more after the video: the Live triage page takes any email typed into it, the Inbox has all 110 emails with every step, and Model facts has the honest numbers, including the ones that are not flattering. Repo: https://github.com/meetgajjarx07/care-triage.
